BR2

BR2 Offshore offers exceptional levels of waterproof, breathable and hardware protection for offshore enthusiasts who spend a lot of time on the water, and expect quality and reliability from their out weather clothing.

BR2 TECHNOLOGY

BENEFITS
Durable waterproof & windproof
15,000mm waterhead pressure
Breathable
Ergonomic design

CONSTRUCTION
The Musto BR2 fabric is an innovative 2-layer microporous and hydrophilic membrane fabric. The fabric membrane allows moisture from the warm, high humidity zone to escape through microscopic pores, whilst preventing water to penetrate.
BR2 fabric is waterproof to a minimum of 15,000mm hydrostatic head and has a breathability of at least 10,000 g/m² per 24 hours. Transfer even after five test washes in the Musto lab.

INNOVATION
DWR (Durable Water Repellent) finishing treatments are applied to all of the garments to encourage water to bead and run-off. This reduces the chance of a garment becoming saturated with water (wetting out) and also affecting the garment's breathability.
